In accordance with your request, I have measured the following home and provided a sketch of the floorplan and included room dimensions. Square footage is taken from outside measurements per ANSI (American National Standards Institute) guidelines, which are the guidelines to which HUD refers. Homes where outside measurements are inaccessible, inside measurements are used and an addition .5' is added for the outside wall. In rooms with sloping ceilings, the area measured is from where the ceiling is at least 5' high with 50% or more of that area being at least 7' high. In rooms that are not square or rectangular, measurements are taken from the longest points in most cases. (cont. below)

(cont.) Room sizes may be rounded to the nearest .5'. Bedrooms are measured excluding closets. Kitchens are measured wall-to-wall and include the nook, if applicable. Condos: The measurement of Condos is not covered under ANSI. Condos are measured from interior walls. All other rules referred to above for single family homes are the same. Townhomes and other Attached Dwellings with a Lot and Block legal description: Attached dwellings are measured from the centerline between units. Exterior walls are measured from the exterior if accessible. If not accessible we use inside measurements and then adjust for the width of the exterior wall. All other rules referred to above for single family homes are the same. The square footage totals on the attached floorplan are estimations and should not be relied upon for any purpose other than marketing the property stated above. All measurements are believed to be accurate, but it is not uncommon for two different professionals to come up with different figures. The attached floorplan is meant to show a general layout of the home and does not account for the thickness of walls or some other architectural features.

Outdoor area's: Pen's, Run's, Arena's are measured to the best of our ability. This is not a survey and these area's are estimated.
